situation: The redevelopment of an existing school into a state of the art, true style 21st century learning facility.
solution: Faced with so many design possibilities, Patrick Architects worked closely with Atkar to conceive an eye catching and modern design. Sustainability being a high priority, the large open collaborative spaces and ceilings of varying height create a range of dramatic and different light filled spaces, providing plenty of natural light. The school is tech-forward, eco-friendly and sympathetic to its natural environment, setting the benchmark for open and flexible learning spaces. The light hue of Goldcore ply lightens, brightens and opens up spaces, giving life to the structure and connecting it to the surrounding natural environment of the wattle trees.
