

The image shows the interior of a modern cafe. The ceiling is a key feature, composed of linear metal panels with integrated lighting. A large, teal-colored cylindrical duct runs horizontally across the upper part of the frame. The space is filled with wooden tables and chairs, some with black frames. Large windows on the right side offer a view of the outside. In the background, there's a staircase with colorful railings and a black sofa. The overall atmosphere is bright and contemporary.

Feature Project

Nineteen Sixteen Cafe, CSL Parkville

Au.diLine Linear Metal Ceiling Panel

Project	Nineteen Sixteen Cafe, CSL Limited, Parkville
Architect	Two Design
Builder	Connellan Industries
Range	Infinity - Premium Acoustic Solutions
Product	Au.diLine metal ceiling panels, with Acoustic Insulation
Finish	Colorbond Surfmist White

Situation A modern refurbishment for this cafe at CSL's Parkville facility.

Solution The project required a high performance acoustic ceiling, robust enough to withstand the daily grind of this refurbished cafe. Two Design wanted to create a dual raked effect for the main ceiling with the attached lower level ceiling, and Au.diLine's continuous linear design complimented the area perfectly. The durable, maintenance free and non-combustible steel solution contrasted beautifully with the warm timber floors and furnishings. Atkar Group worked closely with Connellan Industries and the installers to advise on the best methods to achieve the suspended ductwork and lighting, with an excellent finished result.
