Why choose VoglFuge?

It may look similar, but the VoglFuge system is not like other Seamless Acoustic Plasterboard Ceilings. Designed in Germany, VoglFuge is smarter, faster and almost certainly the better choice for your next project.

Smarter System

Smart Joint Strip System instead of filler
VoglFuge uses a patented strip tape & glue process on the panel joints instead of compound filler. This smarter system is easier and faster to install and also offers maximum crack resistance.

Faster Install

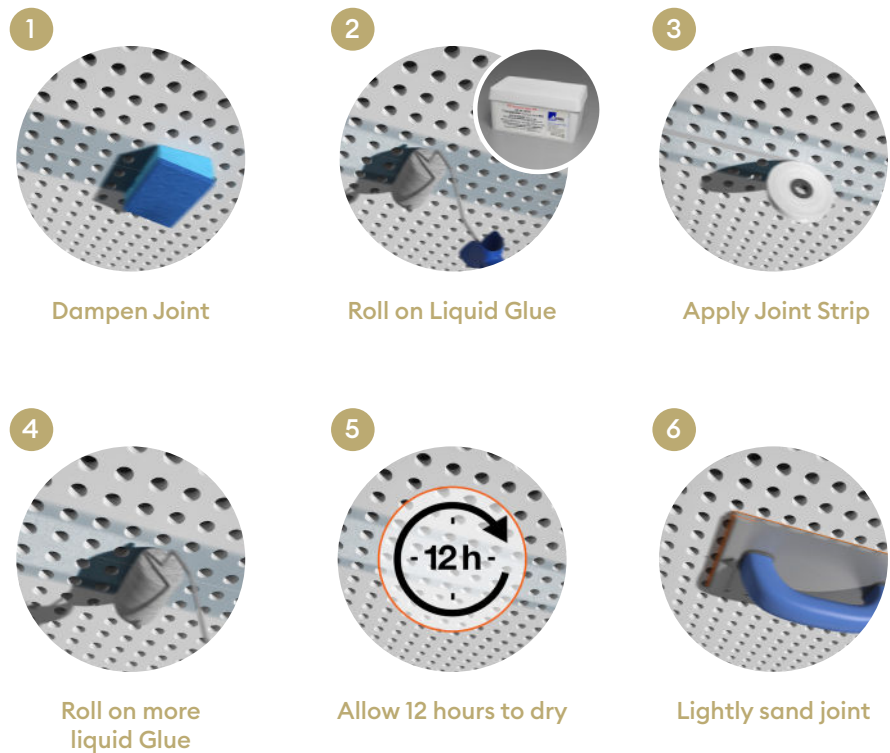

Install faster with VoglFuge
All accessories required are included in the Vogl Install Kit, and thanks to its smarter joint system and overall process, it is proven to be faster to install than the traditional compound filler system.*

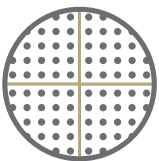

Better Choice

The complete solution
VoglFuge offers many important benefits to architects, installers and the client. Make the better choice and make sure VoglFuge is the ceiling that is specified & installed.

Joint Strip System Overview

Process	System	Time to complete
Panel Alignment	VoglFuge	10
	Traditional	20
Priming Panel Edges	VoglFuge	5
	Traditional	10

What is maximum crack resistance?

There will always be some movement in ceilings over time. VoglFuge's smarter joint strip & glue system provides more flexibility in the joints, therefore greatly reducing the likelihood of hairline cracking over the years to come. We also recommend using our 67mm wide furring channel at the joints.

What is the Vogl Install Kit?

All equipment and tools, including the joint strip tape and glue, is included in the easy to carry Vogl install kit. No need to purchase any additional equipment or materials.

Do you need to be certified to install VoglFuge?

The process to install VoglFuge is different, but easily learned. Atkar offers many ways to support your install from our Project Managers, technical install guide, 3D install video and training sessions.

What technical data is available?

View VoglFuge's technical data sheets on our website including full installation details, Group 1 Fire Rating certificates and acoustic data.

What stock is available?

Atkar are major distributors and stockists of VoglFuge in Australia. Contact us to discuss your stock and delivery requirements.

Who developed the VoglFuge System?

Vogl DeckenSysteme are one of Europe's leading manufacturers of perforated plasterboard ceiling solutions for over 60 years. In 2004 they developed the unique VoglFuge system and is the only seamless plasterboard acoustic ceilings to be installed without filler.
